

Vorax Radio S.O. 105 - Tube Tester

- Click to enlarge

Tube tester introduced in the late thirties, about 1938-1939, by Vorax Radio, Milan Italy. The set was intended to check the emission of American and European vacuum tubes. Test data and settings were printed on tables stored into the cover of the set.

This instrument could also be used as multimeter, capable of measuring DC and AC voltages, output voltages, DC currents and ohms.

- DC and AC voltage ranges: 10, 50, 100, 250, 500 and 1000 V f.s.
- DC currents: 1, 10, 50, 100 and 500 mA f.s.
- Ohms: 5 k and 500 k ohms f.s.

Tables can be downloaded [here](#).
