

ADC XLM and XLMII Dynamic Cartridges

ADC XLM and Super XLM were top performances magnetic cartridges built from the late sixties to the early seventies by Audio Dynamic Corporation.

XLM was equipped with elliptical stylus and was specified for a frequency response from 15Hz to 20KHz within plus or minus 1.5dB.

The quadrasonic Super XLM was equipped with a Shibata hyperelliptical stylus and its frequency response ranged from 15Hz to 50KHz.

Both operated with a tracking force from 0.75 to 1.5g

ADC built two series of this cartridge, the XLM proper, in production up to 1971, and the XLM MK II, since early 1972. By the way, XLM stayed for eXtremely Low Mass.
