

CV2163 – UHF Transmitting Triode

Forced-air cooled transmitting triode. 1500 W anode dissipation. 1.5 kV anode voltage at 1700 mA cathode current. Up to 11 kV in pulsed operation. Usable with external coaxial cavity up to 600 MHz.

16V at 7.3A heater.

[CV2163](#) is the service code for the commercial [ACT28](#).
