

10E/756 – RF Bolometer

No data available for this British bolometer. 10E/756 derives from a S2A prototype and was approved under the CV984 title.

15 ohms resistance measured with an Avometer 8 in the lower range, resistive element glowing at a red/yellow light.

Not known if this tube came with some kind of base. Internally the resistive element is held close to the top window by the two rigid rods spaced by a mica insert.
