

2K41 – Reflex Klystron

Integral cavity reflex klystron. Improved 417B design.

2660 to 3310 MHz tuning range; 1250 V beam accelerating voltage, 60 mA max beam current, -750V reflector, 250 mW output. Forced-air cooling required. Other frequency variants are 2K39, 2K42, 2K43 and 2K44.

1A at 6.3V heater.

Sperry. Data of the family available in the [RMA 452](#) record.

The sample above is complete with its Sperry tuner.
