

## 2SM15 – Temperature-Limited Diode

Temperature-limited diode for application in voltage stabilization or in special control circuits. Used in AC stabilization circuits of the power supply in some instruments, as in the heaters supply of the Tektronix 555 oscilloscope.

Filament to pins 2 and 7, anode to pin 5. Internal jumper between pins 3 and 4. A tensioning spring shorts the anode to filament in the case of open filament.

Thermosen.
