

459A / 459D – Reflex Klystron

More photos available in the [photo gallery](#).

Western Electric reflex klystron designed for microwave relay systems.

6090 to 6175 MHz tuning, waveguide output. 525V resonator, 100 mW out power. Four pins, same format as in [416A](#). Adapted for vapor-phase cooling.

6.3V, 0.88A heater.

In the collection also a sample of 459D. Small differences mainly in the output waveguide flange.
