

4CX1500B / 8660 - Transmitting Tetrode

- Click to enlarge.

EIMAC 4CX1500B, registered as 8660, is a power radial-beam forced-air cooled transmitting triode. Ceramic-metal construction with special breechblock base and integral radiator. 768 gm net weight.

1500 W anode power dissipation.

30 MHz operation, full ratings. 3000 V typical anode voltage.

6 V at 9 A heater operation. 180 sec. cathode warm-up.

First introduced in 1966. Data from the RMA [5231](#) release.
