

6BE6W / 5750 – Pentagrid Converter

Miniature pentagrid converter, designed for reliable use in military or airborne equipment even in conditions of intermittent operation. Ruggedized version of 6BE6. 5000 minimum on-off cycles.

In the photos above well visible some of the mechanical solutions used to improve the stiffness and the resistance to shocks and vibrations which include a very thick glass button at the base, thick mica spacers and ribbed anode cylinder.

Indirect heated cathode, heater 6.3 volts at 300 mA.

5750 was registered to GE in March 1950. Data available in the RMA [835 record](#).
