

6422 - Coaxial Transmitting Triode

- Click to enlarge.

Here a water and forced-air cooled transmitting triode, capable of dissipating 20 kW with a moderate water flow. 12.5 kV anode voltage and 30 kW anode input are specified up to 30 MHz operating frequency. The tube can be used up to 110 MHz at reduced ratings.

Thoriated tungsten filament, 7.0 volts at 85 amps.

The sample was badly damaged in the transportation.

Registered to Machlett, data [here](#).
