

## 7036 – Dual-Control Heptode, Computer Rated

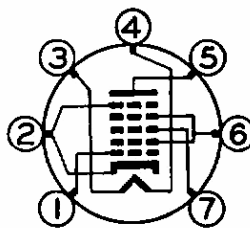

Dual-control heptode designed to operate as gated amplifier in computer circuits. Identical to 5915A except for greater T 5-4 bulb size, 2-3/8" high.

Low cathode interface impedance, to grant full emission even after long periods of operation under cutoff conditions.

6.3 volts at 0.3 A heater.

Registered to General Electric in June 1957. Data refer to those of [5915A](#).
