

TD-36A / 7416 – Gas Diode, Bendix

Cold cathode inert gas filled diode, intended as firing diode in precision RC timing circuits.

133 plus or minus 2 VDC ionization voltage over -55 to +135°C. 10000 pulse min. life.

Supersedes TD-36, with lower firing stability.

Registered to Bendix in March 1959. Data available in the RMA record [2414](#).
