

CV5443 / JPG9-02C - Pulse Magnetron, Low Power

CV5443, corresponding to Mullard JPG9-02C, is a low-power pulse magnetron presumably intended for beacon use. It looks quite similar to other Mullard devices, as [PT5027](#) and [PT5069](#), differing for the round waveguide flange and for the tuning mechanism. It should deliver some 20 W pulses in the X-band.
