

E4T – Beam Deflection Tube, Pulse Generator

Modulated beam-deflection tube, intended for pulse generation in military or in instrumentation applications. T6-1/2 glass bulb with top skirted cap.

No data available, but the tube looks very similar to the [E80T](#). The sample shows visible signs of ageing. The Philips short code printed under the base is 'ZE', which was assigned to E80T. Probably it is a screened version of this one, renamed to custom specs.
