

6218 / E80T – Beam Deflection Switch

E80T is a sort of weird beam-deflection switch, probably intended for use as fast pulse generator in military applications. Made by Philips and Philips related companies, it was registered in USA with the RMA code 6218 by Canadian Rogers.

E80T looks very similar to another Philips mystery tube, the [E4T](#).

The only available documentation is a two-page datasheet included in the RMA [1115](#) registration record.
