

## 6218 / E80T – Beam Deflection Switch

E80T is a sort of weird beam-deflection switch, intended for use as fast pulse generator in military or nuclear instrumentation applications. Made by Philips and Philips related companies, it was registered in USA with the RMA code 6218 by Canadian Rogers.

E80T looks very similar to another Philips mystery tube, the [E4T](#).

A two-page datasheet was included in the RMA [1115](#) registration record. Amperex sold the tube with as 6218, here is the [datasheet](#).
