

## K300 - X-Band Klystron

- Click to enlarge.

X-band klystron intended to be used as local oscillator in radar receivers. British type waveguide round flange. Micrometer tuning.

9320 to 9500 MHz mechanical tuning range. 20 MHz electronic tuning range. 15 mW minimum, 30 mW typical output power. The reflector voltage corresponding to at least 12 mW through the entire tuning range is marked on the body.

6.3 V at 600 mA heater.

Marconi / EEV, 1954.
