

QK422 – Reflex Klystron

Mechanically tunable reflex klystron. Octal base, waveguide flanged output. Intended for use both as local oscillator and transmitting tube in microwave relay systems.

7125 to 8125 MHz tuning range. 100 mW minimum output.

300 V resonator, -130 to -210 V reflector typical supply voltages.

0.44A at 6.3V heater.
