

UV201 / 201 – Very Early Triode

Here some of the variants of this early triode. From left an Audiotron Type 201A, a Type 201-A, a GE Radiotron UV201 and a GE Radiotron UV201A.

The UV201 was already sold by RCA in 1920. The licence terms were rubber-stamped on the brass base, as in the picture below. The thoriated tungsten filament UV201A replaced the UV201 around 1922. Other manufacturers offered similar triodes with different codes, as 201A, 01 or 01A. See also [CX301A](#).
