

3DP1-S2 – CRT, J-Scan Indicator

3" CRT with central deflection electrode for J-type indicators. Electrostatic focus and deflection, diheptal base. 4 kV accelerating voltage. 6.3 V at 600 mA heater.

The sample above is a 3DP1-S2, with the scale from 0 to 500 graduated on the faceplate. In the first registered type, the 3DP1-S1, the scale is graduated from 0 to 1.800 feet.

Introduced during WWII and registered in August 1942. Data available in the RMA record [296](#).

The tube is mounted in an SCR-718 CRT indicator.
