

7883 / BR-169C - Transmitting Triode

External anode power triode mainly intended for use in audio modulator stages. Pure tungsten filament. 498 mm high, 5 kg net weight.

Anode can dissipate up to 1 kw when cooled by convection or up to 1.5 kw with forced-air-cooling directed to the copper anode.

7.5 kV maximum anode voltage.

18.5 volts at 24 amps filament.

Data for Marconi-Ates [7883 / BR-169C](#).
