

8002-R – Transmitting Triode

VHF power triode mainly intended for applications in FM / TV transmitters. The R suffix indicates the version with factory assembled finned radiator for forced-air cooling. Multiple connections to filament and grid to minimize the inductance. Tungsten filament, center-tapped, copper radiator. 110 MH max full ratings, up to 200 MHz at reduced ratings.

Filament 16 V at 38 amps
Plate dissipation up to 1200 watts, depending upon air flow

General Electric datasheet for [8002-R](#).
