

LS180 – UHF Power Triode

UHF power triode, designed to operate up to about 500 MHz.

- 12 kV anode voltage
- 4 A cathode peak current pulses.
- About 8 kW RF pulses.

The filament voltage can vary between 5.8 and 6.6 volts, the actual value being etched on the bulb.

Used in the transmitter-receiver unit FuSE 62 of the Würzburg German radar.
