

VT25 / DET25 / CV1025 – Power Triode, Great Britain

British transmitting tube. Lots were also produced in U.S. by Raytheon and maybe by other firms during WWII, under the 'Lend & Lease Act'. This sample was made by Raytheon, although the code is almost entirely rubbed off.

- 36 W plate power dissipation
- 1.2 kV anode voltage
- Usable up to 15 MHz
- British large L-4 base.
- 7.5 V at 1 A filament.

British service code CV1025. Data available in the [CV1025](#) spec sheet.
